DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior art teaches the use of a interline CCD image sensor which uses a plurality of phases to drive vertical shift registers in order to read out data. The prior art teaches applying a first set of voltages to the phases of the gate electrodes of the vertical shift registers sufficient to accumulate holes. Furthermore, the prior art teaches applying a second voltage to the first set of gate electrodes while simultaneously applying a more positive voltage to a second set of gate electrodes. However, the prior art does not teach applying an additional positive voltage pulse to the first set of gate electrodes during the period of more positive voltage on the second set of electrodes.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
